

CARBIDE TIPPED PLOW / WING BLADES

Reduce down time by using long lasting VBL™ Carbide tipped plow / wing blades.

Tungsten carbide inserts brazed into a specially prepared groove in the blade greatly increases wear life when compared to conventional blades. This makes carbide tipped plow / wing blades ideal for severe wear applications. Various sizes and shapes of tungsten carbide inserts are available to suit any application.*

VBL applied tungsten carbide matrix (TCM™), hard facing or strips of hardened plate (VALSTRIP™) are available as options to prevent premature base material wear “washout” and eliminate the need for a “face” or “cover” blade. Carbide tipped snow plow blades are available in various sizes of flat and curved profiles*, with hole sizes and patterns to suit all OEM equipment.

Custom size configurations available on request

VBL heat treated parts are warranted against breakage throughout the useable life of the part.
