

HIGHWEAR™ PLOW / WING BLADES

In severe conditions insist on VBL™ HIGHWEAR™ plow / wing blades.

Vallite™ heat treated (thru-hardened) one piece* blades are fortified by attaching hardened blocks to the back of the blade inside a welded steel housing. This effectively makes a blade with built-in “wear shoes”. These “shoes” in addition to the unique one-piece** design increase both the wear life and the structural rigidity preventing moundboard / wing damage. Installation is also simplified as there is only one part to install. These attributes make the HIGHWEAR™ plow / wing blade idea for rough conditions where carbide tipped blades are not recommended.

*Custom size configurations available on request

** Also available in sections

VBL heat treated parts are warranted against breakage throughout the useable life of the part.
